

The hydraulic excavator

The hydraulic excavator for children is a device, which in view of its construction and the way of working, looks almost like professional construction equipment. It is intended for play; however, its size enables a child and its minder to play together. This device takes our children into a world of Bob the builder. It is an amazing experience both for the babies and adults. The hydraulic excavator starts after throwing a coin into the device; it gives a possibility to carry the balls, and dig in gravel and sand. Its acoustic and light signals reflect the work of a real excavator. Railings enable placing banners on them.

It is possible to play with the excavator both, in the inside and in the outside e.g. on the beach, in the swimmingpool, etc.

- the size of the excavator (length x width x height) 3,00m x 2,00m x 1,50m
- weight - 250 kg
- supply - 220 – 230 V

price : 4 000 euro
